Hưng Yên Võ

Full Stack Developer

02/11/2005 | 0355161941 | voy32103@gmail.com

Nam | An Phú Đông, Hồ Chí Minh | GitHub: voy32103-code

GPA : **2.74** | Portfolio : https://my-portfolio-web-ex66.onrender.com

EXPERIENCE SUMMARY

● 1+ years of experience working as a Full Stack Developer, specializing in the .NET ecosystem and Android Native applications.
● Understanding of System Architecture (Three-Tier), database optimization, and modern web security techniques.
● Strong problem-solving skills, capable of resolving complex technical issues such as Data Concurrency (Race Condition), Caching synchronization, and payment gateway integration.
● Innovator of highly interactive UI/UX designs (Neumorphism, Glassmorphism) combined with robust backend capabilities.
● Hands-on experience with real-time data communication (SignalR) and distributed caching systems (Redis) to build high-performance, SaaS-level applications.

EDUCATION

2023 - present

Ho Chi Minh City University of Foreign Languages - Information Technology | HUFLIT

Major: Software Engineering (3rd-year Student)

SKILL

- **Languages:** C#, Java, JavaScript (ES6+), SQL, HTML5/CSS3.
- **IDE**:Visual Studio,Visual Code ,Antigravity,Android Studio
- **Frameworks & Libraries:** ASP.NET Core 8.0 (Web API, Razor Pages, MVC), Entity Framework Core (EF Core), Bootstrap 5, Chart.js, Sortable.js.
- **Mobile Development:** Android Native (Java), Retrofit2, Gson, SharedPreferences.
- **Integrations & Security:** Google OAuth 2.0, ASP.NET Core Identity, JWT
- **Databases**: SQL Server, PostgreSQL (NeonDB),Oracle,Mysql.
- **Tools & Servers:** Visual Studio, Git/GitHub, Docker, Render Cloud, Ngrok.
- **Cloud & Real-time:** Redis Distributed Caching, SignalR (WebSockets).
- **AI Agents**:Gemini,Claude,ChatGPT,..

CAREER GOALS

2026-2030

A highly motivated 3rd-year Software Engineering student seeking a **Full Stack Developer Intern** position. My goal is to leverage my hands-on experience in

.NET 8, Redis, and SignalR to build scalable, high-performance web and mobile applications. I am committed to producing high-quality code through **SonarCloud** analysis and **Unit Testing**, while aiming to evolve into a **Senior Full Stack Engineer** within the next 4 years.

PROFESSIONAL EXPERIENCE

2025 - Nay

HungYenAirline-Multi-platform Flight Booking System | Full-stack Developer

● Project
description: A comprehensive, end-to-end flight booking system operating simultaneously on Web and Android Mobile platforms, providing a seamless user experience from searching flights to electronic ticket generation.
● Responsibilities:
● Architected and implemented a modern
Three-Tier architecture, strictly separating business logic from user interfaces.
●Integrated the VNPAY
payment gateway, fully handling complex callback flows: App triggers API -> Web processes payment -> Server updates Database -> App auto-syncs ticket status.
● Solved critical data
Concurrency issues (Race Conditions) during seat booking by implementing Optimistic Concurrency ([Timestamp]), entirely preventing duplicate seat reservations.
● Built a robust 2-layer security system:
Cookie Authentication for the Web portal and JWT Bearer Tokens for the Mobile API, alongside secure BCrypt password hashing.
● Developed advanced features including
real-time booking history tracking and automated E-ticket generation (PDF formats bundled with QR codes).
● Created a comprehensive Admin Dashboard for
total system management.
● Technologies: oBackend: ASP.NET Core 8.0, Entity Framework Core, SQL Server, RESTful
API, JWT, BCrypt.Net. o Frontend (Web): Razor Pages, Bootstrap 5, Glassmorphism UI.
● Frontend (Mobile): Android Native
(Java), Retrofit2, Gson, SharedPreferences.
● Integrations:
VNPAY API, IronPDF, QRCoder, Ngrok.

2026 - present

Digital Tech Portfolio & Music Player | Full-stack Developer

● Project description: A highly interactive personal portfolio integrated with a custom, real-time "Spotify-like" music player and a data-driven
SaaS-level Analytics Admin Dashboard
● Responsibilities:
● Designed and coded a modern UI/UX using Neumorphism concepts, featuring a dynamic drag-and-drop song queue management system.
● Drastically improved system performance by
integrating Redis Distributed Caching (Cache-Aside Pattern) and implementing intelligent auto-invalidation logic upon data updates. o Utilized SignalR to establish real-time state synchronization (Play, Pause, Seek-bar tracking) across multiple devices and browsers simultaneously.
● Secured the application with Google OAuth

2.0 and actively mitigated advanced vulnerabilities (Path/Directory Traversal, Remote Code Execution) during physical file manipulation.

● Built an Admin
Analytics Dashboard visualizing traffic trends with Chart.js, analyzing visitor IP addresses via Geolocation APIs, and tracking system events.

● Integrated on-the-fly
rendering logic using QuestPDF to generate customized CVs and dynamic Shareable
QR codes directly from database records without physical storage.

● Technologies: o Backend:
ASP.NET Core 8.0 (Razor Pages), Entity Framework Core, PostgreSQL (NeonDB). o Real-time
& Cache: SignalR, Redis Cloud (Singapore).

● Frontend:
Vanilla JS, Bootstrap 5, Chart.js, Sortable.js.

● Tools & Integrations: Render
(Docker), QuestPDF, Google OAuth 2.0.
